NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

o obtain more detailed information in areas where Base Flood Elevations BFEs) and/or floodways have been determined, users are encouraged to consult (BFEs) and/or floodways have been determined, uses are encouraged to consult the Flood Profiles and Floodways Date and/or Summary of Billwate Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies the FRML Usess adoubd be aware that BFEs shown on the FRMI represent the FRMI process and the study of the FRMI process on the FRMI process only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation date presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.7 North American Vertical Dahum of 1988 (NAVD 88). Users of this Flow should be aware that coastal flood elevations are also provided in the Simmary of Stillwater Elevations table in the Flood insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood insurance Program. Floodway widths and other pertitioner \$loodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this

The projection used in the preparation of this map was Universal Transverse Mercator (UTM) Zone 12M. The horizontal datum was NAO S. GRSO. OF FIRMs for algorithms of the project of FIRMs for algorithms (ITM) positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1920 and the North American Vertical Datum of 1980, 4st the National Geodetic Surveys website at <a href="https://doi.org/10.1081/j.j.com/national-googy-or-contact-the-National-Geodetic Surveys website at <a href="https://doi.org/10.1081/j.j.com/national-googy-or-contact-the-National-Geodetic Surveys with elicitoring address:

NGS Information Services NOAA, N/NGS12 National Geodetic Survey SSMC-3, #9202 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

o obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the information Services Branch of the National Geodelic Survey at (301) 713-3242, or visit its website at http://www.ngs.noas.gov

Base map information shown on this FIRM was derived from U.S. Geological Survey Digital Orthophoto Quadrangles produced at a scale of 1:12,000 from photography dated 1992 or later.

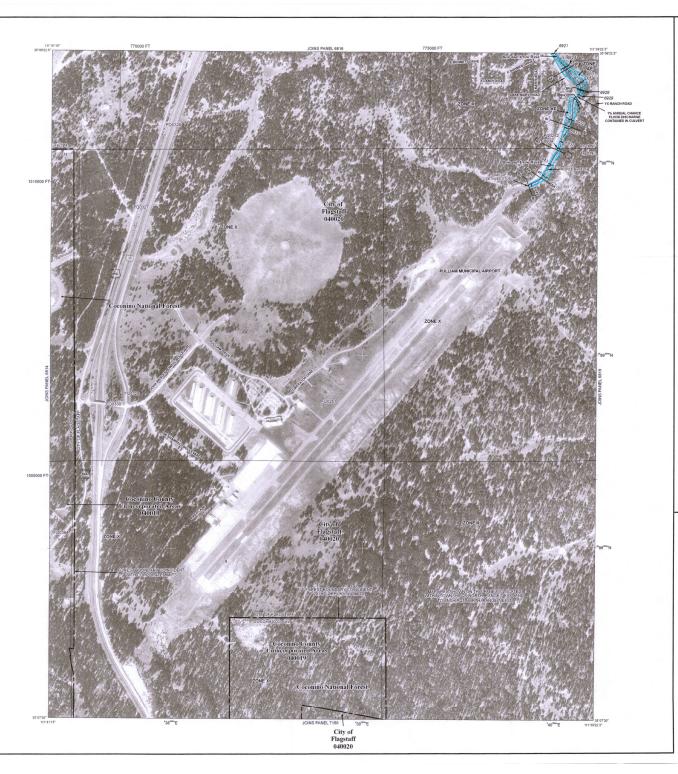

This map reflect some detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Ecolosay Data basiles in the Flood insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on his map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit boatlons.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repostory addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is borrowningly in the panels on which each community is borrowningly is borrowningly is borrowningly is borrowningly in the panels on which each community is borrowningly in the panels of the

Contact the FEMA Map Service Center at 1-800-358-9516 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-990 and 8 tweeblast at http://www.fman.ov/misc.

If you have questions about this map or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Rood Hassed Area is the area subject to flooding by the 1% annual chance flood. Area of Special Rood Hassed Area is the area subject to flooding by the 1% annual chance flood. Area of Special Rood Hassed include Zones A, AB, AH, AD, AK, AP, V, and VE. The Base flood Bevalson is the water-surface election of the 1% pravious discrete Color.

No Base Flood Elevations determined

ZONE AE Base Flood Elevations determined. ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood

Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also

Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.

Coastal flood zone with velocity hazard (wave action); no Base Flood Coastal flood zone with velocity hazard (wave action); Base Flood Blevetions determined.

FLOODWAY AREAS IN ZONE AE
